

... ENHANCE YOUR PERCEPTION.

Take Back **Control** of Every Dosing Weighing Today.

SensWEIGHT connects to existing dosing scales and records every weighing event. Give production, quality, and management a traceable weighing history they can filter by time period, recipe, line, batch, or operator.

- ✓ Works with existing dosing scales - no scale replacement required
- 🕒 Installed in hours, not days - minimal disruption to food production
- 📱 Analyze from any selected period - shift, batch, recipe, campaign, or audit window

THE QUESTION EVERY FOOD PRODUCER MUST ASK

CAN YOU PROVE EVERY DOSING AFTER IT HAPPENS?

Every batch depends on grams that must be correct, documented, and explainable. What if each weighing created a traceable record ready for quality, audit, and deeper analysis?

- Can you trace who weighed, what was weighed, and exactly when?
- Can you compare dosing behavior across selected shifts, batches, or recipes?
- Can quality teams find drift, rework risk, and operator patterns before complaints?

SENSWEIGHT®
by Unified Cloud Sensors

Your 24/7 traceability and statistical intelligence layer for dosing scale operations.

SELECTIVE WEIGHING PERIOD

Shift B | Recipe 482 | 06:00-14:00 | 1,248 events

THE SOLUTION

TRACE EVERY WEIGHING.
SELECT ANY PERIOD.
ANALYZE WHAT MATTERS.

SensWEIGHT transforms dosing scales into a **connected traceability and statistics layer for food production**. Every weighing is logged with time, value, material context, and production metadata, then turned into usable insight for quality and operations.

TRACE EVERY DOSING EVENT

Capture the exact weight, timestamp, scale, line, recipe, batch, and operator. **Every weighing becomes searchable evidence** for quality, audit, and production review.

SELECT THE EXACT TIME WINDOW

Analyze only what matters: a shift, sanitation cycle, batch campaign, recipe run, or complaint period. **No more averages that hide the real problem.**

TURN WEIGHING DATA INTO STATISTICS

See mean value, deviation, tolerance hits, underdosing, overdosing, and trend movement. **Find process changes before they become waste or recalls.**

ADVANCED TIERS - DIGITAL DOSING SCALES
PREDICTIVE INTELLIGENCE & SCALE HEALTH MONITORING

SPOT SCALE DRIFT BEFORE IT SPREADS

Track weighing behavior over selected periods and compare lines or products. **Early warning helps prevent systematic dosing error** across production.

PROTECT RECIPE COST AND COMPLIANCE

In food production, small dosing deviations repeat thousands of times. **Control giveaways, reduce rework, and support HACCP and audit evidence** with one data source.

REAL RESULTS - FOOD DOSING SCALE OWNERS

THE COST OF NOT KNOWING

Four practical cases. Four different problems. One traceable weighing history.

● CASE 01 - BAKERY LINE - INGREDIENT TRACEABILITY

A bakery had recipe complaints but no reliable way to reconstruct dosing history. After SensWEIGHT, every flour, sugar, and additive weighing was logged with timestamp, batch, and operator. Quality could open the exact complaint window and see which weighings were inside tolerance and which were repeated.

RESULT: THE BATCH RECORD BECAME EVIDENCE, NOT GUESSWORK.

● CASE 02 - MEAT PROCESSING - SELECTIVE SHIFT ANALYSIS

*Giveaway was visible in monthly totals, but the cause was hidden. By selecting only night-shift weighings over two weeks, SensWEIGHT showed a pattern of **systematic overdosing during one production period**. The team corrected the operating routine without changing the recipe or blaming the wrong line.*

RESULT: SELECTIVE TIME ANALYSIS FOUND THE REAL LOSS.

● CASE 03 - DAIRY PRODUCTION - DEVIATION TREND

*A dosing station was technically within tolerance, but statistical history told a sharper story. SensWEIGHT showed the average weighing value slowly moving toward the upper limit across several production days. Maintenance checked the feeder and prevented a **recurring overfill trend** before it became product waste.*

RESULT: STATISTICS CAUGHT THE DRIFT BEFORE TOLERANCE FAILED.

● CASE 04 - READY MEAL PLANT - AUDIT RESPONSE

*During a customer audit, the plant had to prove dosing consistency for one product campaign. Instead of exporting a month of mixed data, the quality manager selected the exact production period and generated a focused weighing report with **event history, deviations, and traceable timestamps**.*

RESULT: AUDIT EVIDENCE WAS READY IN MINUTES.

THE ADVANTAGES OF SENSWEIGHT®

01

FULL WEIGHING TRACEABILITY

Every dosing event is stored with time, value, scale, and context. **Reconstruct any batch or complaint period** from verified data.

02

SELECTIVE PERIOD ANALYSIS

Filter by shift, batch, product, operator, recipe, or any chosen time range. **Find patterns that monthly reports hide.**

03

STATISTICAL PROCESS VALUE

Track average, deviation, tolerance hits, and trend direction. **Turn weighing history into practical process intelligence.**

04

QUALITY AND COST PROTECTION

Reduce giveaway, rework, and audit stress while supporting food-safety documentation. **The line keeps running; the data gets smarter.**
