

... ENHANCE YOUR PERCEPTION.

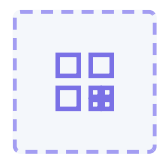

Make Your Assets **Unstoppable** Today.

SensVibra smart sensor stands out as the most sophisticated solution in the predictive maintenance market. Equipped with 4G/LTE connectivity, it proactively dispatches instant alerts upon detecting any vibration changes.

✓ 2 minute Plug & Play setup — Magnet, Adhesive and Stud mount supported

🕒 IP68 protection — High temperature thermoplastic used with aluminium base

📶 LTE/4G Connectivity — 2-3 years battery life

ARE YOU FIXING MACHINES THAT ARE **HEALTHY?**

Reduce costs and increase efficiency by planning your maintenance using real time insights not traditional reactive based regime. Eliminate unplanned downtime.

- Are you relying on reactive maintenance instead of real-time insights?
- Can you detect mechanical defects like misalignment or bearing wear early?
- Are unexpected breakdowns causing costly production stoppages?

SENSVIBRA
by Unified Cloud Sensors

Your 4-in-1 industrial vibration sensor for predictive maintenance.

THE SOLUTION

PREDICT FAILURES. INCREASE UPTIME. REDUCE COSTS.

SensVibra transforms your maintenance strategy with a **4-in-1 smart sensor**. It monitors Tri-Axial Vibration, Acoustics, Magnetic Flux, and Surface Temperature — alerting you the moment an anomaly is identified. 2 minute Plug & Play setup.

TRI-AXIAL VIBRATION

Enables detecting mechanical defects like **misalignment**, **imbalance**, **bearing wear**, etc. Identify faults at an early stage.

ACOUSTICS (AIRBORNE) ULTRA SOUND

High Frequency Acoustics help confirming various issues like **lubrication problems**. Receive real time alerts once an anomaly is identified.

MAGNETIC FLUX

Provides a basic indication into the **induction motor rotor insulation wear** and shorted turns. Monitor and analyze machine health parameters in real time.

ADVANCED DIAGNOSTICS · INSIGHTSAI PLATFORM AUTOMATED REPORTS & RECOMMENDATIONS

SURFACE TEMPERATURE

Correlating it with other sensor data can provide added validation into **aging-related defects**. High-precision vibration sensors built for harsh environments.

RUNNING HOURS

Monitor the overall running status of your assets to **measure productivity**. Schedule and optimize your maintenance schedules using real time data.

REAL RESULTS · PREDICTIVE MAINTENANCE

THE COST OF NOT KNOWING

Digitize end to end process from fault detection to tracking corrective action.

● STEP 01 · FAULT DETECTED

*Smart Sensor measures machine health parameters continuously and **detects an early stage fault**. Presage uses advance signal processing to reduce unwanted noise and enhance the fault characteristics of the signal.*

→ **IDENTIFY FAULTS AT AN EARLY STAGE.**

● STEP 02 · FAULT ALERT

*AI generates an alert and **sends it to the users via SMS/Email**. We use multivariate time series models to correlate the behaviour of various features in time, frequency and time-frequency domain.*

→ **RECEIVE REAL TIME ALERTS ONCE AN ANOMALY IS IDENTIFIED.**

● STEP 03 · DIAGNOSIS AND PRESCRIPTION

*InsightsAI Platform automatically diagnoses the fault mode and a **Diagnostics/Recommendations report** confirmed by our subject matter experts is automatically shared with the users. Asset wise fault diagnostics and recommendations report will be generated automatically.*

→ **EMPOWER USER WITH ACTIONABLE DATA.**

● STEP 04 · LEARN AND IMPROVE CONTINUOUSLY

*The machine becomes healthy after the actions performed by the maintenance team and the AI platform **uses the data to enhance the fault detection and diagnostics accuracy**. The corrective action or inspection team performs the necessary steps and confirms the issue.*

→ **INCREASE THE LIFE OF YOUR EQUIPMENT AND REDUCE MAINTENANCE COSTS.**

THE ADVANTAGES OF SENSVIBRA

01

ELIMINATE UNPLANNED DOWNTIME

AI based predictive maintenance solution supports and empowers maintenance teams to know the real time status of their assets and **detect a fault at an early stage**.

02

DIGITIZE MAINTENANCE

Reduce costs and increase efficiency by planning your maintenance using **real time insights not traditional reactive based regime**. Make your maintenance operations paperless.

03

OPTIMIZE SPARE PARTS/INVENTORY

Use actionable data to optimize spare parts procurement decisions and **increase asset life**. Reduce the overall consumption of spare parts inventory.

04

COLLABORATE REMOTELY

Take Data Driven Decisions. Plan and automate work orders, **digitize paper based procedures**, forms, checklists and track them in real time.
